You scored **75%** on the **Meteorology** examination.
This was graded as a **PASS**. (The passmark was **75%**.)

Based on your responses, we suggest you study the following areas:

- Decoding TAF and METAR reports
- Gradient and surface winds
- Cloud descriptions used in observations and forecasts
- Cold, warm and occluded fronts

These are the questions that you got wrong:

1) In the northern hemisphere, when compared to the gradient wind strength, over land the surface wind may be:

- A one third of the strength, and backed approximately 30 degrees
- B two thirds of the strength, and backed approximately 30 degrees
- C one third of the strength, and backed approximately 10 degrees
- D two thirds of the strength, and backed approximately 10 degrees

You chose **D**, but the correct answer was **A**.

3) Yeovilton is reporting EGDY 090850Z AUTO 11009KT 9999NDV // NCD 16/12 Q1024. What does NCD mean?

- A No Cloud Data
- B No Cloud Detected below 10000 ft
- C No Cloud Detected below 5000 ft
- D No Cloud Detected

You chose **D**, but the correct answer was **C**.

An explanation is available at <http://www.airquiz.com/explain/NCD.htm>
